- Online individual and team training
- Interactive training guides
- 1st line diagnostic support
- Fast turnaround on repairs
- UK based technical support. (We speak English not Tech)
- 95% of issues resolved in 24 hours.
- Footage downloads and delivery (encrypted, protected, backed-up)
- Redeployment of cameras
- Full repair and replacement
- Remote monitoring and commissioning (time and date stamping, recording, connection issues, power loss, live streaming)

The system captures the video from a camera, or a recorder (DVR or NVR) sends snapshots to the Cloud Servers using mobile 4G data and enables users to view Live or Event footage securely on any browser enable device (PC, Laptop, Tablet, Phone), day or night.

Sharing your video with other agencies or colleagues, could not be easier. You can send them a secure link in a few seconds, or you can give them temporary access to a site or just a specific camera, for as long as you want.

### System Control Unit

The system control unit is the heart of the device.

It securely houses all the hardware, that makes this work, in a lockable Mild Steel weatherproof enclosure.

The Router is an industrial grade 4G device with both Wireless and Wi-Fi capabilities & can be updated to 5G when available.

The Router comes with a Vodafone 450GB Data Sim and is remotely monitored by our powerful RMS (Remote Management System) application.

The package provides 30 days of normal cloud event storage and 12-months storage for Flagged events.

The system is ultra-secure, GDPR compliant, so your data is safe with us.

And most importantly, it is simple to use and very cost effective. The system is camera brand agnostic, so we can select the most appropriate camera(s) for your needs. Indoor, Outdoor, Day, Night, Overt, Covert, (PTZ) Pan Tilt and Zoom or ANPR (Number Plate Recognition). You tell us what you want, when and where you want it and we do the rest.

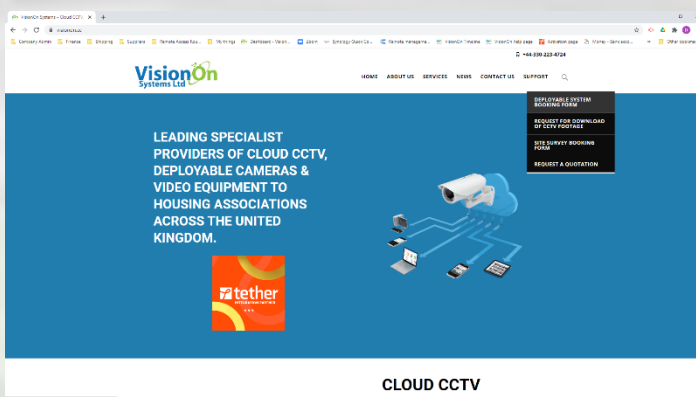

Additionally, later this year we will be adding a solar powered solution to our product range, designed specifically for tackling Fly Tipping in rural or 'Off Grid' locations where sourcing power and internet from fixed sources is not possible or practical.

Any Time Any Place Anywhere

Because our system does not require the installation of any software (your IT Guys are going to love that) then you are not tied to a single device, you can use and hardware that supports an internet browser.

In the office you can use your PC, at Home your Laptop and when you are out and about, on the job, your phone or Tablet will work just as well.

And finally, all our services can be booked directly from our website, even when you only have your mobile phone with you.
